AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 2, line 14, with the following rewritten paragraph:

Recently, the Internet has been widely used by not only a client PC (Personal Computer) but also mobile phone and PDA (Personal Digital Assistant) terminal, and information has been provided in various languages and to various level users. A method for providing information has ~~bee~~ been diversified.

Please replace the paragraph beginning at page 6, line 8, with the following rewritten paragraph:

In the information processing apparatus, the Web information automatically accessing by the reference path from the terminal is generated and provided to the terminal. Accordingly, at a side of the terminal, a user of the terminal is not required to input the terminal type information and it is possible for the terminal to obtain the reference path including the terminal type information from the Web information. Moreover, since the reference path is provided to the terminal before the Web information desired by the user ~~sis~~ is provided, it is not necessary for a developer to develop a Web application generating the Web information for each terminal type.

Please replace the paragraph beginning at page 42, line 5, with the following rewritten paragraph:

The terminal type "0" denotes that the terminal type cannot be specified. In a determination process in step S4 of FIG.8, the terminal type is not determined. For example, in a case of a request from ~~InternetExploer~~ <u>InternetExplorer</u>^{TM}, generally, the Web browser type "MSPIE^{TM}" is set to the user agent information 365 when the terminal type is "PDA", and the Web browser type "MSIE^{TM}" is set to the user agent information 365 when the terminal type is "PC". However, even if the terminal type is "PDA", there is a case in that the Web browser "MSIE^{TM}" is set to the user agent information 365. Accordingly, since the terminal type corresponding to the Web browser type "MSIE^{TM}" cannot be specified beforehand, "0" is set to the terminal type for the Web browser type "MSIE^{TM}".
